Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 5,7,8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bruckert (5920549) and Ghosh (6018667).

Bruckert shows searching a plurality of pilot channels associated with a plurality of base stations to choose the "best" base station(s). Then the paging channels from the best base stations are further used to set up a call. Bruckert differs from the claimed invention in that it does not show the paging channels (from the plurality of base stations) in substantially overlapping time slots. See col. 4 lines 49-57.

In an analogous art, Ghosh shows the advantages of having neighboring base stations synchronized to each other. Synchronized base stations imply that the paging channels substantially overlap. This decreases acquisition time. See col. 2 lines 10-22.

Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have synchronized the paging channels of adjacent base stations in Bruckert since Ghosh shows this reduces acquisition time.

Art Unit: 2635

2. Claims 1-4,6,9-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bruckert and Gosh as applied to claim 5,7,8 above, and further in view of Willey (6138034).

In an analogous art, Willey teaches the use of a quick paging channel which reduces idle handoffs. See col. 1 lines 25-35. Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to have used a quick paging channel in the above modified system since such would decrease idle handoffs.
